

TANKOZONE - TESTIMONIAL

I was sceptical at first to install the Tankozone system and that it would do what it was promised to do. I already have a good water filtering system in place and assumed that the Tankozone system would not improve on that. However, I decided to have the system installed and were pleasantly suprised by the reactions, my scepticism proved unwarranted.

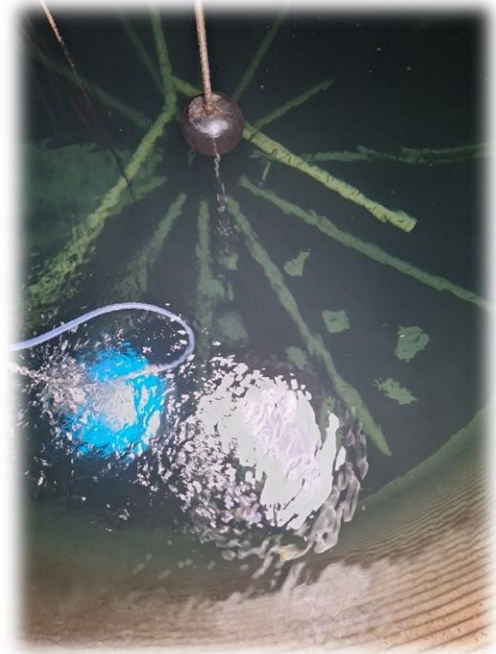

A couple of days after installation;

“My partner just loves the taste of the water after we installed the tank ozone, no more bottled water, thanks!”

A week after installation I sent my daughter to check the condition of the filter;

“Wow, I can see the bottom of the tank”

I went up myself to check and were amazed how clear the water was.

The water bowls for the goats tended to develop a “sliminess” that contributed to the goats reducing their water intake. Since the ozonated water fed to the water bowls, there is no more slimy build up and the water stays clear. It is early days yet, but definitely an improvement.

The TANKOZONE system, a decision worth every cent.

Worth smiling about.
